Full Stack Development: Overview

Ever wondered how your **favorite website works?**
You could be building the next one!

Imagine this: millions of people visit **Flipkart**  every day.

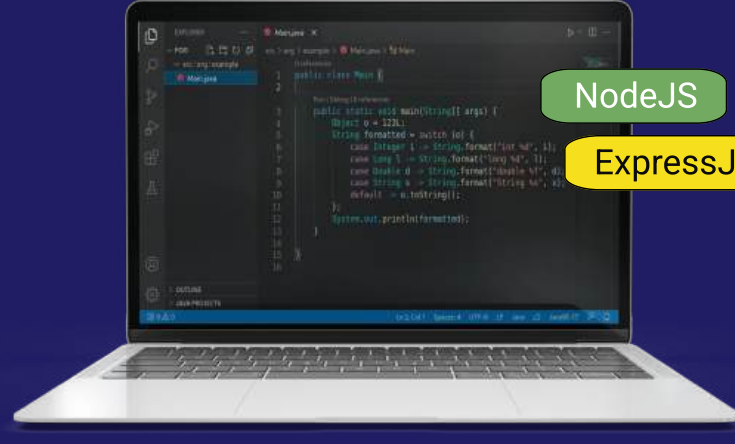

But have you ever stopped to think about the complex web technologies that make the seamless shopping experience possible?

That's the magic of ✨
full stack development!

How the interface looks so good?

The user-friendly search, product displays, and cart are all **front-end**, built with **HTML**, **CSS**, **JavaScript** and **ReactJS**.

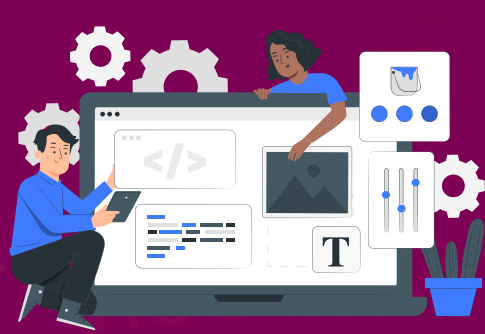

But what makes it work?

The powerful back-end (**NodeJS** and **ExpressJS**) handles adding items to your cart, order processing and implementing business logic.

Where's all this info stored?

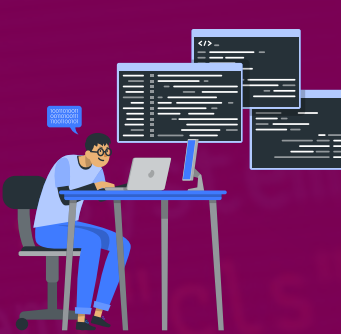

A secure database (**MongoDB**) stores product details, prices, and user accounts – the backbone of Flipkart!

Front End

Back End

Database

These three parts – **the front-end, back-end, and database** – work together seamlessly, like the foundation, framework, and interior design of a building.

They all come together to create a complete and functional website.

Now, let's add the **power tools** that turn a good developer into a great one:

Why is Python a must-learn?

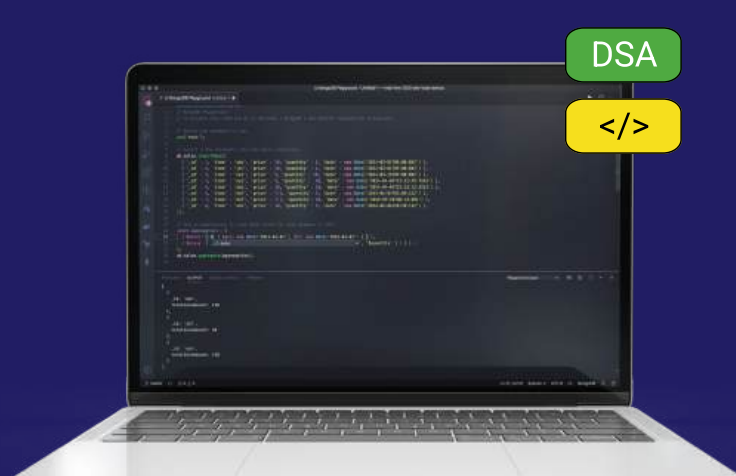

Whether it's automating tasks, working with APIs, or building scalable backend systems – **Python** is a go-to language used by top companies like Netflix and Instagram.

What makes your code smart & efficient?

That's where **Data Structures & Algorithms (DSA)** come in.

DSA helps you write optimized code, handle real-time problems, and crack top tech interviews.

Think of it as the brain behind how your application handles large data and responds in milliseconds.

Can your app handle 1 million users?

System Design teaches you exactly that.

It helps you architect scalable, high-performance applications used by millions – just like Flipkart or Amazon.

From load balancing to microservices, you'll learn to build systems that don't break when it matters most.

Are you ready to be called a Dev and build the next generation of online experiences?

Front End

Back End

System Design

Full Stack Development: Scale & Scope

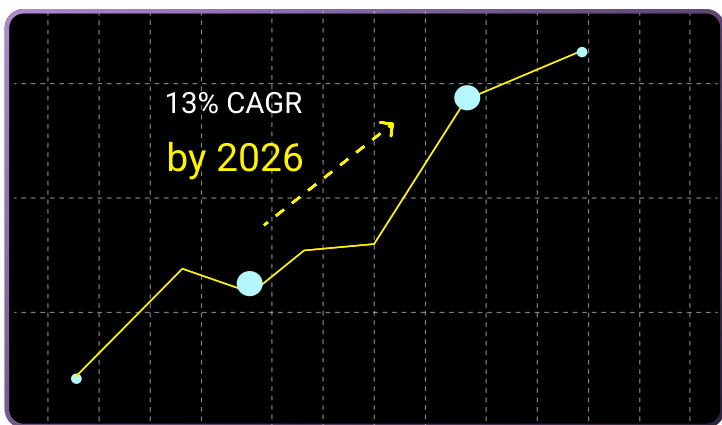

High Demand and Job Security

Strong Earning Potential

Career Growth

According to research conducted by the **US Bureau of Labor Statistics**, it's estimated that the demand for full stack development is likely to increase by **30%** in the upcoming years.

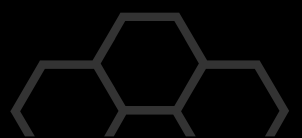

The job market is expanding rapidly, with a projected **13% CAGR by 2026**, creating numerous opportunities for skilled developers.

Full stack development offers a dynamic career path with opportunities for growth, creativity, and impact.

If you're passionate about technology and enjoy building complete web solutions, this field is worth exploring! 🚀👨‍💻

Now is the best time to start picking up the knowledge needed for this career path.

Why choose WsCube Tech?

Your Success is Our Mission

WsCube Tech's Upskilling Pedagogy

Project-Based Learning

Engage in real-world projects, especially designed to enhance your critical thinking, collaboration, and problem-solving skills.

Create Netflix clone using HTML tags and CSS properties

NETFLIX

Clone the homepage of Myntra, emphasizing CSS Flexbox property for layout design

Myntra

Industry-Ready Curriculum

This course has been designed according to the top company's job description covering all depths in detail.

Module 3

Dive into CSS3 & animation

- ✓ CSS Position Properties (Absolute, Relative, Fixed)
- ✓ Introduction to CSS3
- ✓ CSS3 Vendor Prefixes
- ✓ Transform CSS (Scale, Rotate, Skew, Translate)
- ✓ CSS3 Animation
- ✓ CSS Calc, Before, After and Variables

Inside Program

Uncover the program modalities

 Live Sessions	 Video Lessons	 Quizzes	 Projects
 Assignments	 Cheat sheet	 Case Studies	 Notes

Milestone 1

Web Foundation

Duration: 3 weeks

Lay the groundwork of web development by mastering HTML structure and styling with modern CSS. From forms and layouts to Flexbox, animations, and responsive design techniques - build beautiful, structured, and interactive web pages from scratch.

9 Live Sessions 3 Projects 8 Assignments 3 Quizzes

- Module 1

Getting started with HTML & CSS

 - Introduction to HTML
 - Basic HTML Tags
 - Introduction to CSS
 - CSS Selectors
 - Layout division
- Module 2

Dive into CSS properites and designing

 - Box Model
 - HTML Forms
 - CSS Sizing Units (px, rem, em)
 - Shadows, Border Radius
 - Flex Box
 - Pseudo selectors
- Module 3

Dive into CSS3 and animation

 - CSS Position Properties (Absolute, Relative, Fixed)
 - Introduction to CSS3
 - CSS3 Vendor Prefixes
 - Transform CSS (Scale, Rotate, Skew, Translate)
 - CSS3 Animation
 - CSS Calc, Before, After and Variables

Project

HTML

Design a 3-page HTML site with consistent styles and layout across all pages.

CSS

Build a static IIP website using CSS Flexbox for responsive layout & structure.

Myntra

Clone Myntra’s key pages using Flexbox to understand real-world UI replication.

Jam Session

Web Wizards Showdown
Recreate real-world landing pages using HTML & CSS in a fun, timed design challenge.

Milestone 2

Core Frontend Dev

Duration: 5 weeks

Dive deeper into responsive design, JavaScript logic, and browser interaction. Learn DOM manipulation, event handling, promises, and modern JS features - while also mastering Bootstrap and converting real-world Figma designs to code.

15 Live Sessions 4 Projects 11 Assignments 5 Quizzes

- Module 4

Design to Code & JavaScript Beginning

 - CSS Column Properites
 - CSS Grid
 - Figma to HTML Conversion
 - HTML5 Introduction
 - Media Query & Responsive design
 - Introduction to JavaScript
 - Operators in JavaScript
 - Conditional Statements in JavaScript
- Module 5

Deep dive into JavaScript fundamentals

 - JavaScript Looping statements
 - Nest loops and patterns
 - 2D Array and its functions
 - For Of & For In loop
 - Array functions (map, function and reduce)
- Module 6

DOMinate with JavaScript

 - Obeject and "this" keyword in JavaScript
 - Introduction to DOM
 - Event handling (Mouse and Keyboard)
 - Getter and Setter in DOM
 - Handling style with JavaScript
 - Event bubbling, propagation and prevent default
- Module 7

Advanced DOM & Browser features

 - Traversing using DOM
 - JavaScript Date Object
 - JSON parsing
 - Local stoage management
 - Promise handling
 - Exception handling
 - GSAP Introduction
- Module 8

Design rapidly with Bootstrap

 - Bootstrap introduction
 - Bootstrap layout
 - Bootstrap components
 - Bootstrap utilities
 - Advanced JavaScript concepts
 - Arrow Functions in JavaScript
 - Destructuring in JavaScript

Project

Figma

Convert a Figma landing page design into a responsive HTML and CSS webpage.

Calculator

Build calculators for interest, BMI, and calories with dynamic input handling.

API

Create apps for movie search, weather forecast, and text translation using APIs.

BlinkIt

Use Bootstrap to clone BlinkIt’s homepage layout with responsive design.

Jam Session

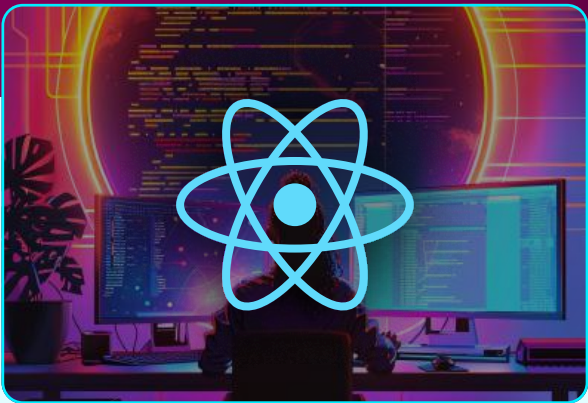

JavaScript Battle Ground
Solve DOM puzzles, JS riddles, and mini frontend challenges in a competitive coding setup.

Milestone 3

Modern Frontend Dev with React JS

Duration: 4 weeks

Master modern frontend development with ReactJS, from components and hooks to API handling and global state management using Redux. Build real-world projects, integrate styling libraries, and explore the power of Next.js for SSR and routing.

12 Live Sessions

5 Projects

3 Assignments

5 Quizzes

Module 9

Getting started with ReactJs & Dive into TailwindCSS

- Understand the complete flow of TailwindCSS
- TailwindCSS project building
- Introduction to ReactJs
- State, Prop and Components in ReactJs
- Styling in ReactJs
- ReactJs Hooks
- List rendering and Conditional rendering
- Bidirectional data transfer in ReactJs

Module 10

Dive into React styling & API fetching

- Styled components in ReactJs
- External styling library integration
- Form handling in ReactJs
- API fetching
- Component life cycle
- Controlled components
- React router DOM

Module 11

Deep dive into React with Ecommerce

- Ecommerce project building using ReactJs
- ContextAPI un ReactJs
- Redux toolkit
- Cart functionality

Module 12

A step ahead of React: NextJs

- Introduction to NextJs
- SSR in NextJs
- API fetching
- Routing in NextJs
- Mini E-commerce using NextJs

Recorded

System Design for Development

- Design of Real state website like 99Acers
- System Design: Overview, Key Concepts, and HLD vs. LLD
- System Architecture Overview & Design Patterns in HLD
- Low-Level Design (LLD): Principles, Design Patterns, Database, API, and Security

Project

99acres

Design a real estate listing site like 99Acres with search and filter features.

Netflix

Clone Netflix's homepage using Tailwind CSS with responsive and dark theme.

zomato

Create two Zomato pages using ReactJS components and routing.

BigBasket

Clone BigBasket's homepage UI using HTML and CSS for ecommerce practice.

Market UI

Design a furniture marketplace UI with product listings and cart features.

Jam Session

React-A-Thon

Build mini React apps or dynamic components live using hooks, props, and routing.

Milestone 4

Backend Development with Node.js, Express, MongoDB, and Generative AI

Duration: 5 weeks

Learn to build powerful server-side applications using Node.js, Express, and MongoDB. Develop a full-featured eCommerce admin panel with MVC architecture, CRUD operations, real-time notifications, secure payment gateway integration and also learn AI integration into full stack.

15 Live Sessions 5 Projects 7 Assignments 5 Quizzes

Module 13

Getting started with NodeJs, ExpressJs and MongoDB

- Introduction to NodeJs
- Module of NodeJs (filesystem, http)
- Introduction to ExpressJs
- Express Server Setup
- Introduction to MongoDBx
- CRUD Operations using MonogDB

Module 14

Understanding the MVC with Ecommerce

- Beginning of Ecommece Project
- Flow of MVC (Model, View and Controller)
- ExpressJs Routing and Group routing
- Admin Panel Category Module (CRUD operations)
- Searching, Pagination, Multiple delete.
- MongoDB aggregate functions

Module 15

Enhancing Ecommerce Admin Panel

- Product module management on Admin Panel
- Product gallery management
- API integration using NodeJs & NextJs

Module 16

Ecommerce Admin Panel Final Touch

- User Auth managements
- JWT Token
- Cart functionality
- MongoDB queries

Module 17

Payment gateway integration & order management, and Generative AI

- Payment gateway integration & orders management for ecommerce website
- Payment Gateway Integration in React Js using Node Js API
- Order Management System
- Real Time Order Placed Notification Via Socket Connection

Project

Node.js

Start a Node.js server with a custom external module response handler.

CRUD Operations

Create a dashboard to manage product categories with full CRUD operations.

Ecommerce Admin

Extend ecommerce admin to handle inventory, pricing, and product details.

Ecommerce Builder

Develop a full dynamic ecommerce platform with frontend and backend flow.

Payment Integration

Integrate payment gateway & manage orders for ecommerce transactions.

Jam Session

Backend Builders Arena

Create or enhance API routes, backend logic, and database integration in a group setup.

Bonus

Build a solid programming foundation with Python - one of the most in-demand and beginner-friendly languages. Learn data structures, functions, and OOP concepts like classes, objects, inheritance, and encapsulation to write clean, modular code. Learn to build powerful server-side applications using Node.js, Express, and MongoDB. Develop a full-featured eCommerce admin panel with MVC architecture, CRUD operations, real-time notifications, and secure payment gateway integration.

Getting started with Python and its fundamentals

- What is Python?
- Why learn Python?
- How Python works
- Python & Jupyter Notebook installation & Hello World"
- Variable in Python
- Operators in Python
- Comments in Python
- Conditional Statments (if , if-else, if-elif)
- For, While, Pass, Continue & Break
- String , List, Tuple, Dictionary & Its functions
- Creating functions, Arguments, Lambda , map & filter function

Deep dive into python with OOPs

- What is OOP? Procedural vs OOP.
- Real-world analogy (e.g., Car, Bank Account).
- class and object keywords.
- Creating a simple class and instantiating objects.
- Understanding `__init__()` method.
- Hands-on: Create a class Student with name, roll, and grade
- Instance vs Class variables.
- Adding class variables using class name.
- Creating instance methods.
- self keyword explained.
- Hands-on: Build a Library class with books list and member info.
- Concept of encapsulation.
- Public, Protected, Private members (`_`, `__`).
- Creating getter and setter methods.
- `@property` and `@<property>.setter` decorators.
- Hands-on: BankAccount class with balance encapsulation.
- What is Inheritance?
- Single-level and Multi-level Inheritance.
- Method overriding using `super()`.
- Hands-on: Create Vehicle, Car, and ElectricCar classes.
- Method overloading (via default args) and overriding.
- Polymorphism using duck typing.
- Abstract base class using `abc` module.
- `@abstractmethod` explained.
- Hands-on: Abstract class Shape with Circle, Rectangle.

Getting started with DSA

- Real-world use cases, Roadmap overview
- Big-O, Big-Θ, Big-Ω; $O(1)$, $O(n)$, $O(\log n)$
- Base case, recursive calls, tracing
- Factorial, Fibonacci, Nested recursion
- Generating subsets/permutations
- Indexing, Traversal, String reversal, Palindromes

Handling Array & String with DSA

- Start-end approach, Applications
- Subarrays, max/min windows
- Frequency counting, Anagram check
- Push, Pop, Peek, Expression Evaluation
- Enqueue/Dequeue, Circular Queue, Use cases

Handling LinkedList DSA

- Singly Linked List, Traversal
- Linear Search vs Binary Search
- Bubble, Selection, Insertion Sort
- Merge Sort, Quick Sort
- `sorted()`, `.sort()`, lambda usage

Handling Tree with DSA

- Node, Root, Leaf, Tree creation
- Inorder, Preorder, Postorder
- Nodes, Edges, Representation
- High-level logic & applications (DOM, Maps)
- Activity Selection, Huffman Coding (only intuition)

Competitive Programming on LeetCode

- LeetCode problems of Array and Stacks
- LeetCode problems of Linked List and Strings
- Questions asked in MNCs
- Hacker Rank contest on DSA

I had an amazing experience studying at the best web development course in Jaipur. The curriculum was well-structured and covered all the key concepts and technologies in the field. The faculty was approachable and supportive, and their teaching methods were both effective and engaging. I would highly recommend this course to anyone looking to improve their web development skills.
